Professional Summary

Software Engineer with experience in application troubleshooting, REST API debugging, database integrations, automated testing, and deployment workflows. Familiar with **Grafana**, **Kibana**, Linux command-line diagnostics, Docker, and CI/CD concepts for investigating application issues and validating releases. Strong foundation in incident triage, log analysis, SQL, Redis, and root cause investigation, with a focus on application reliability, clear documentation, and timely issue resolution.

Professional and Technical Skills

- **Monitoring and Observability:** **Grafana**, **Kibana**, dashboards, log analysis, error-pattern investigation, application health monitoring, metrics interpretation
- **Technical Support and Troubleshooting:** Application debugging, API failure analysis, issue reproduction, incident triage, root cause analysis (RCA), recovery validation, runbooks/SOP concepts, escalation and ticket documentation
- **Linux and Networking:** Linux CLI, process and service inspection, CPU/memory/disk diagnostics, log filtering, ports, DNS, HTTP status codes, connectivity troubleshooting
- **Databases and Backend:** SQL, PostgreSQL, MongoDB, Redis, Node.js, Express.js, Prisma, REST APIs, database connectivity, query debugging, request/response validation
- **DevOps and Deployment:** **Docker**, **GitHub Actions**, CI/CD pipelines, Git, build troubleshooting, deployment validation, environment configuration, Railway, Vercel
- **Testing and Quality:** Vitest, Playwright, unit testing, integration testing, end-to-end testing, regression testing, functional validation
- **Tools and Technologies:** Jira workflow familiarity, Python, JavaScript, TypeScript, React, Next.js, TanStack Query, n8n, OpenAI/Anthropic APIs

Experience

Associate Software Engineer — Apr 2025 – Jun 2026
Thoughts2Binary — *Gurugram, India*

- Investigated application errors, API failures, and unexpected behavior across **3 React/TypeScript applications**, using debugging workflows and log analysis to narrow down issues and validate fixes.
- Used **Grafana** and **Kibana** monitoring and observability workflows to inspect application metrics and logs, identify error patterns, and support troubleshooting and issue investigation.
- Improved API data handling by replacing ad-hoc fetching with **TanStack Query**, implementing caching, optimistic updates, and background synchronization; reduced redundant API calls by **60%** and addressed race conditions.
- Built automated testing coverage using **Vitest** and **Playwright** across unit, integration, and end-to-end scenarios, reaching **85% test coverage** and improving regression detection.
- Worked with **Git**, CI/CD workflows, and deployment validation to verify application behavior after changes and help identify build or release-related issues.
- Improved frontend quality and accessibility by addressing issues against **WCAG 2.1 AA** guidelines, achieving zero critical accessibility violations.

Next.js Intern — Jan 2024 – Aug 2024
Uglandindia.co — *New Delhi, India*

- Migrated application pages to **Next.js server-side rendering**, troubleshooting rendering and performance issues and achieving a Largest Contentful Paint (LCP) below **1.8 seconds**.
- Developed and tested product-filtering workflows across **5+ dimensions**, validating UI state, API responses, and expected application behavior.
- Performed functional checks and debugging after code changes, improving page performance and contributing to a **35% increase in organic traffic**.

Full Stack Freelance Developer — Oct 2023 – Jan 2024
RobocraftLabs.com — *Remote*

- Developed and delivered a React-based application within **6 weeks**, connecting frontend workflows with backend services and validating key user journeys.

- Integrated **Mailchimp** and the **WhatsApp Business API**, troubleshooting integration issues and validating request/response behavior; reduced response time from **48 hours to 6 hours** and increased the subscriber list by **30%**.
- Used Git-based version control and deployment checks to validate application changes and support reliable releases.

Relevant Projects

AgentHub – AI Agent Platform

Next.js, TypeScript, Docker, CI/CD

- Built an AI agent platform with tool calling, search, calculator, calendar integrations, and retrieval-augmented generation (RAG) for PDF documents.
- Configured **GitHub Actions CI/CD** for deployment to Railway with separate staging and production environments; containerization reduced Docker image size by **60%**.
- Evaluated agent responses using **50+ LLM evaluations** and Helicone, and implemented prompt caching to reduce LLM costs by **22%**.

MentorAI – AI Career Coach

Next.js, Gemini, Recharts, Clerk

- Built an AI career-coaching application offering resume feedback and mock interviews, reaching **200+ users in the first two weeks**.
- Integrated authentication and interactive salary-trend and skill-gap visualizations; validated user workflows and application responses.

FlashMeet – Real-Time Video Chat

Node.js, WebRTC, Redis, PostgreSQL

- Developed a real-time video-chat application using WebRTC and Socket.io signaling, with **Redis**, PostgreSQL, and Stripe checkout integration.
- Worked across signaling, backend connectivity, and application workflows, targeting a **95%+ connection success rate**.
- Live demo: flash-meet-mu.vercel.app.

Education

Noida Institute of Engineering and Technology — **2021 – May 2025**
B.Tech in Information Technology — *Noida, India*

Sarvodhya Bal Vidayalaya — **2020**
Class XII – CBSE; 76%

Little Flower Public School — **2018**
Class X – CBSE; 88%
